Lecture 06: Context based models & BERT overview

Radoslav Neychev

Outline

- 1. OpenAl Transformer
- 2. ELMo
- 3. BERT
- 4. GPT-2 & GPT-3
- 5. Q&A

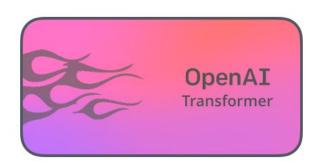

Based on: http://web.stanford.edu/class/cs224n/slides/cs224n-2019-lecture13-contextual-representations.pdf
https://jalammar.github.io/illustrated-transformer/

OpenAl Transformer: Pre-training Decoder for Language Modeling

OpenAl Transformer

- The Encoder-Decoder structure of the transformer made it perfect for machine translation
- But what about sentence classification?
- Main goal: pre-train a language model that can be fine-tuned for other tasks

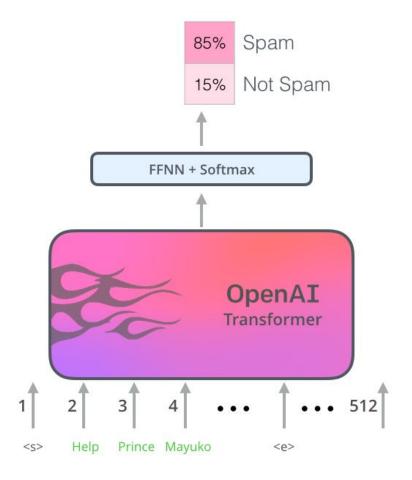

OpenAl Transformer

Differences from vanilla Transformer:

- no encoder
- decoder layers would not have the encoder-decoder attention sublayer
- Pre-train the model on predicting the next word using massive (unlabeled) datasets

OpenAl Transformer

- During pre-training phase layers have been tuned to reasonably handle language
- Now let's use it for downstream tasks (e.g. sentence classification)

Input transformations for different tasks

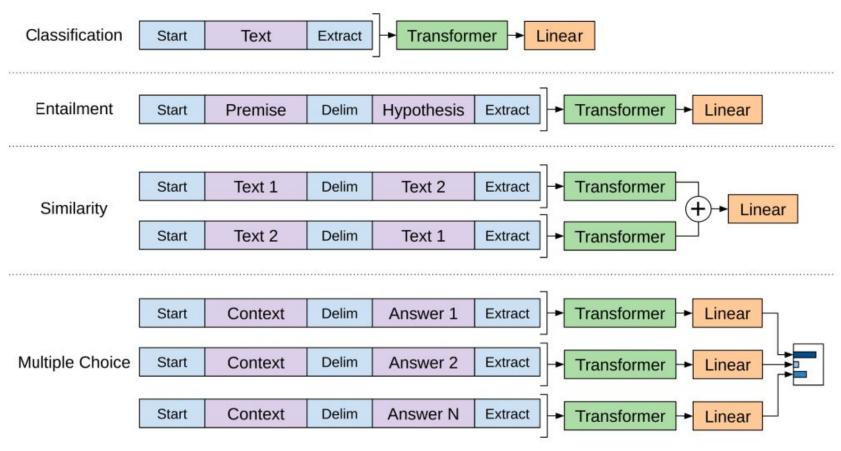

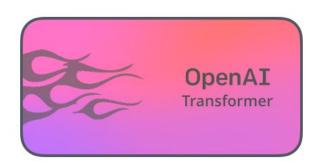

Image source: http://jalammar.github.io/illustrated-bert/

ELMo: context that matters

ELMo: contextualized word embeddings

"Why not give it an embedding based on the context it's used in – to both capture the word meaning in that context as well as other contextual information?"

Peters et. al., 2017, McCann et. al., 2017, Peters et. al., 2018 in the ELMo paper

ELMo – deep contextualized word representations

ELMo

What does it stand for?

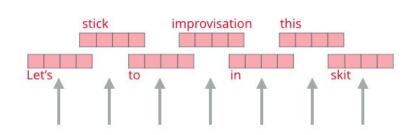

- 1. Expedited Labour Market Opinion
- 2. Electric Light Machine Organization
- 3. Enough Let's Move On
- 4. Embeddings from Language Models

ELMo: contextualized word embeddings

ELMo: Contextualized word embeddings

El Mo **Embeddings**

ELMo

- uses a bi-directional LSTM trained on Language Modeling task
- a model can learn without labels

Let's

to improvisation in

Words to embed

Bidirectional Language Models (biLMs) Aardvark 0.1%

Possible classes: All English words 10% Improvisation Zyzzyva FFNN + Softmax

biLMs consist of forward and backward I Ms:

Forward:

$$p(t_1, t_2, ..., t_N) = \prod_{k=1}^{n} p(t_k | t_1, t_2, ..., t_{k-1})$$

Backward:

$$p(t_1, t_2, ..., t_N) = \prod_{k=1}^{N} p(t_k | t_{k+1}, t_{k+2}, ..., t_N)$$

LSTM predicts next word in both directions to build biLMs

Output Layer LSTM

Layer #2

LSTM Layer #1

ELMo: main pipeline

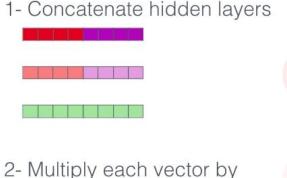

Embedding of "stick" in "Let's stick to" - Step #1

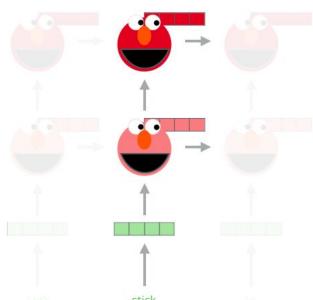

Embedding of "stick" in "Let's stick to" - Step #2

ELMo: main pipeline

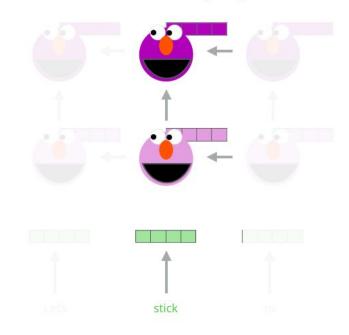

a weight based on the task

Forward Language Model

Backward Language Model

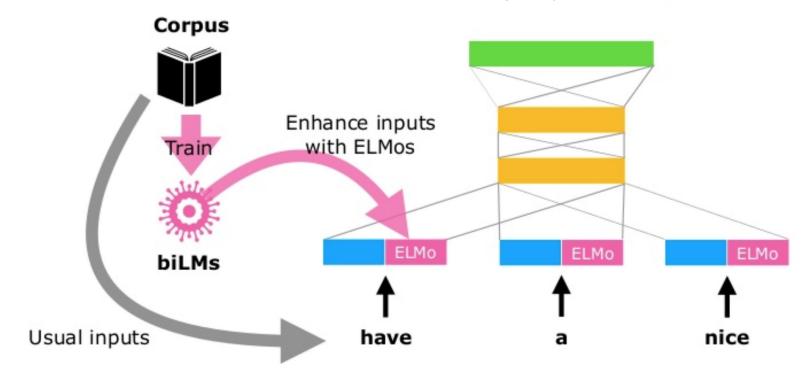

3- Sum the (now weighted) vectors

ELMo represents a word as a linear combination of corresponding hidden layers

ELMo

ELMo can be integrated to almost all neural NLP tasks with simple concatenation to the embedding layer

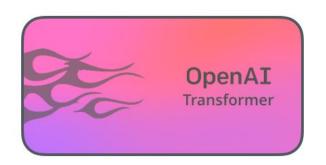

ELMo: overview

- Pretrained ELMo models: http://allennlp.org/elmo
- AllenNLP is a library on the top of PyTorch
- Higher levels seems to catch semantics while lower layer probably capture syntactic features

BERT

Bidirectional Encoder Representations from Transformers

1 - Semi-supervised training on large amounts of text (books, wikipedia..etc).

The model is trained on a certain task that enables it to grasp patterns in language. By the end of the training process, BERT has language-processing abilities capable of empowering many models we later need to build and train in a supervised way.

Semi-supervised Learning Step

Dataset:

Model:

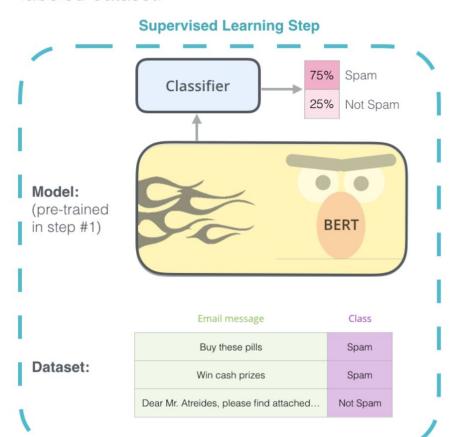

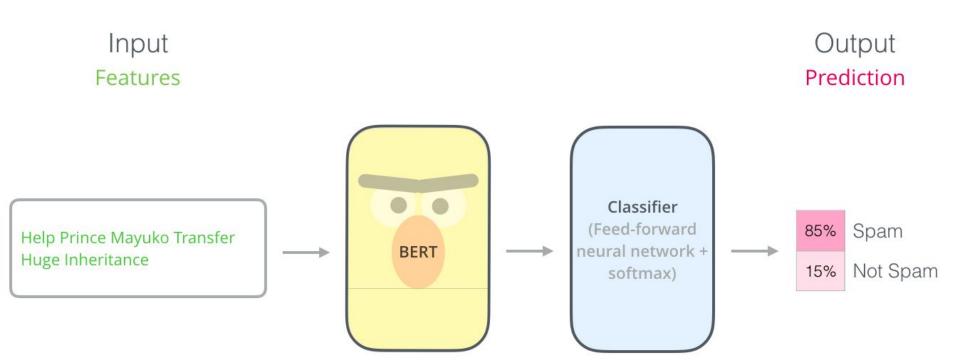

Objective:

Predict the masked word (langauge modeling)

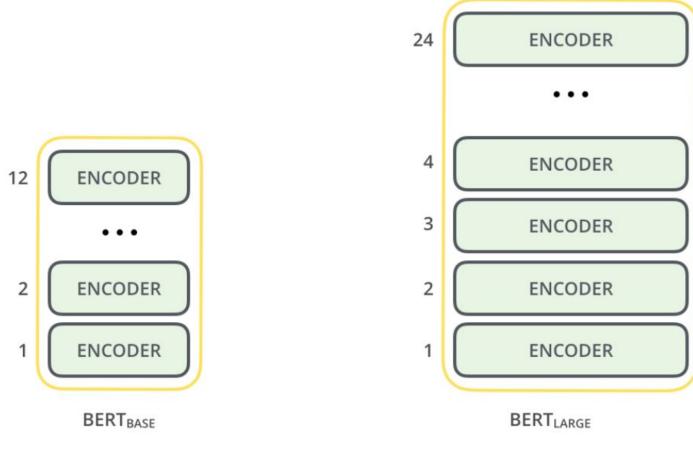

2 - Supervised training on a specific task with a labeled dataset.

BERT

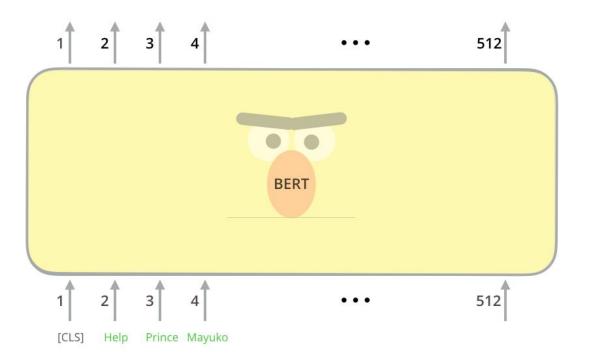

BERT: base and large

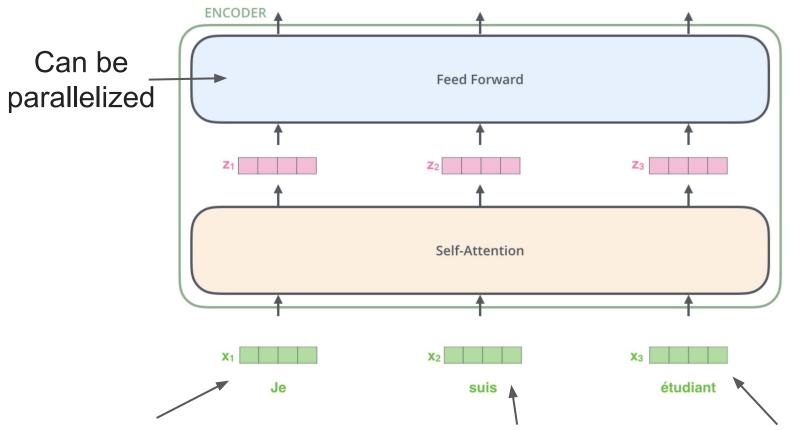

BERT vs. Transformer

	THE TRANSFORMER	BERT	
		Base BERT	Large BERT
Encoders	6	12	24
Units in FFN	512	768	1024
Attention Heads	8	12	16

Model inputs

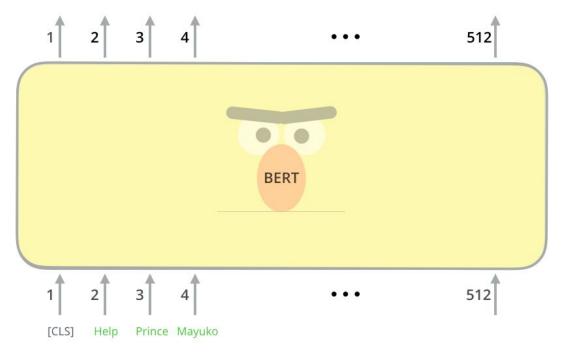

Transformer Block in BERT

the word in each position flows through its own path in the encoder 27

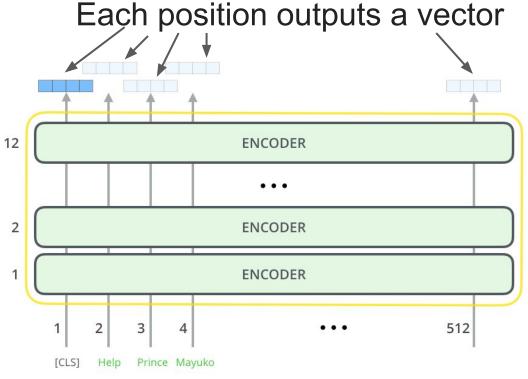

Model inputs

Identical to the Transformer up until this point

Why is BERT so special?

Model outputs

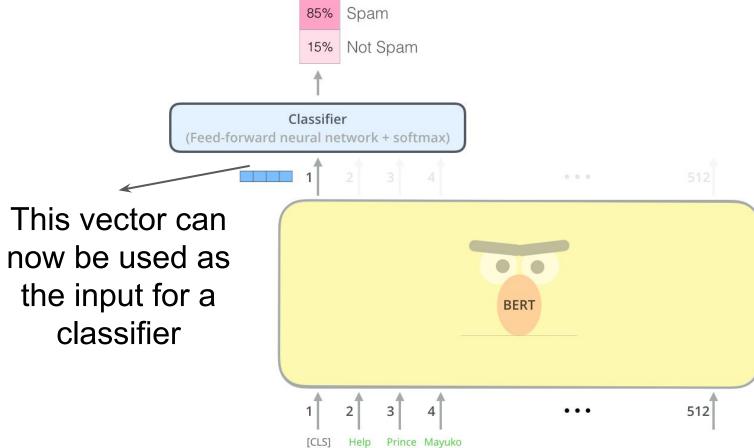

For sentence classification we focus on the first position (that we passed [CLS] token to)

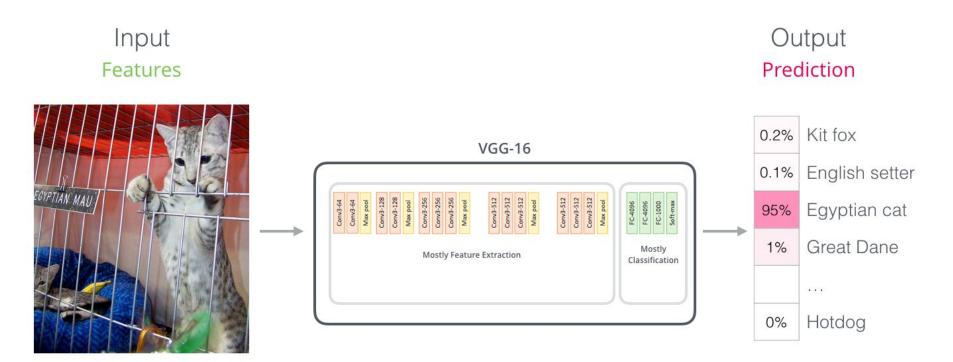

BERT

Image source: http://jalammar.github.io/illustrated-bert/

Model inputs

Similar to CNN concept!

0.1% Aardvark BERT: pre-training Use the output of the Possible classes: masked word's position All English words 10% Improvisation to predict the masked word 0% Zyzzyva FFNN + Softmax 512 **BERT** Randomly mask 512 15% of tokens [MASK] in Let's stick this skit [CLS] Input this skit Image source: http://jalammar.github.io/illustrated-bertfcls] to improvisation in

BERT: pre-training

- "Masked Language Model" approach
- To make BERT better at handling relationships between multiple sentences, the pre-training process includes an additional task:
 - "Given two sentences (A and B), is B likely to be the sentence that follows A, or not?"

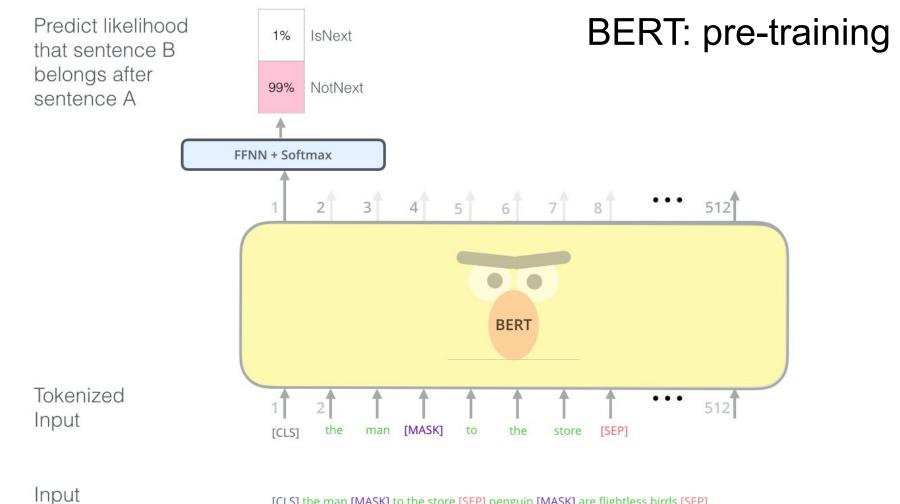

Image source: http://jalammar.github.io/illustrated-bert/

[CLS] the man [MASK] to the store [SEP] penguin [MASK] are flightless birds [SEP]

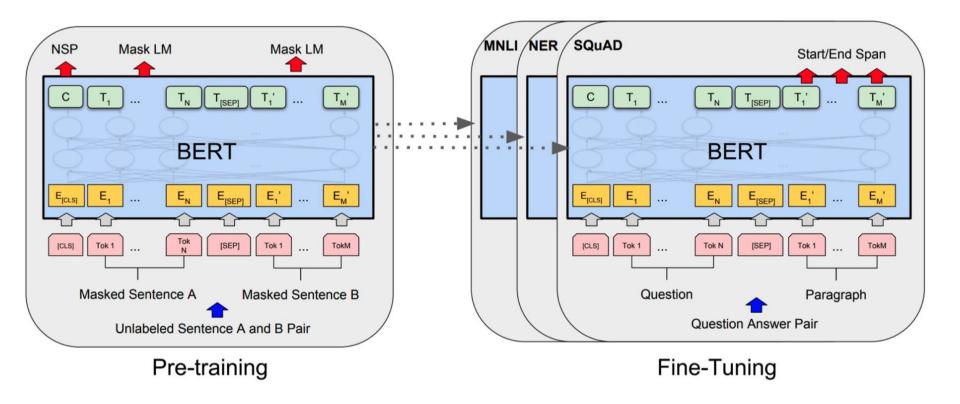

Sentence A Sentence B

BERT: input data format

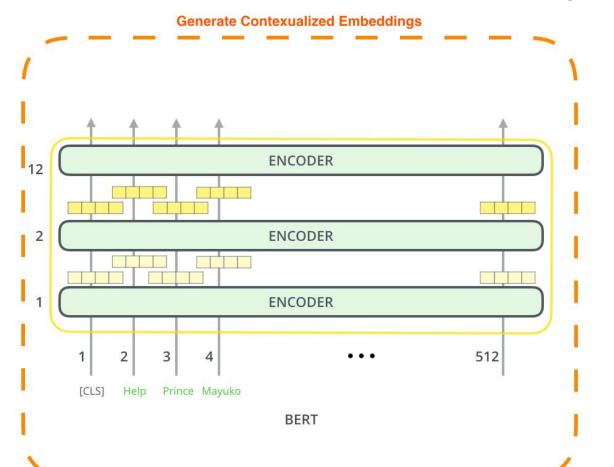

For each tokenized input sentence, we need to create:

- **input ids**: a sequence of integers identifying each input token to its index number in the BERT tokenizer vocabulary
- segment mask: a sequence of 1s and 0s used to identify whether the input is one sentence or two sentences long. For one sentence inputs, this is simply a sequence of 0s. For two sentence inputs, there is a 0 for each token of the first sentence, followed by a 1 for each token of the second sentence
- **attention mask**: a sequence of 1s and 0s, with 1s for all input tokens and 0s for all padding tokens

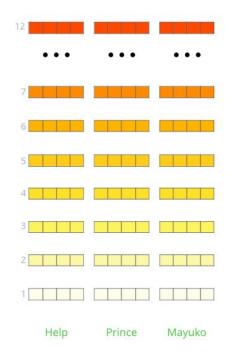

BERT: fine-tuning for different tasks

BERT for feature extraction

The output of each encoder layer along each token's path can be used as a feature representing that token.

But which one should we use?

BERT for feature extraction

What is the best contextualized embedding for "Help" in that context?

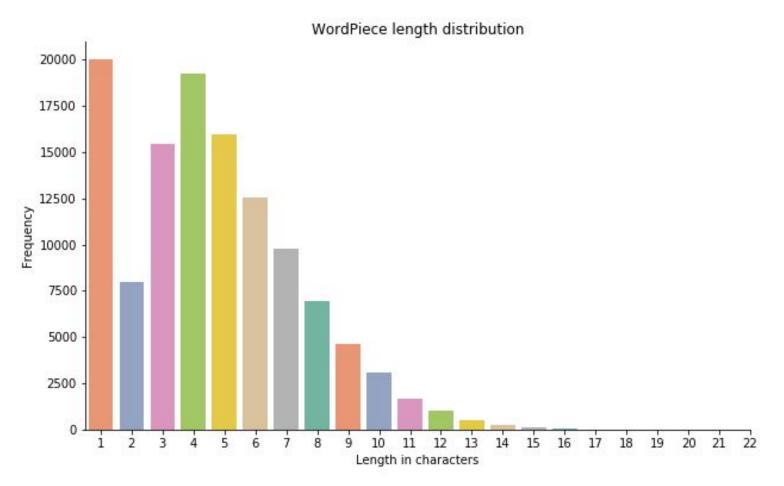

For named-entity recognition task CoNLL-2003 NER Dev F1 Score First Layer Embedding ____ 91.0 Last Hidden Layer 94.9 Sum All 12 95.5 Layers Second-to-Last 95.6 Hidden Layer Sum Last Four 95.9 Hidden Help Concat Last 96.1 Four Hidden Image source: http://jalammar.github.io/illustrated-bert/

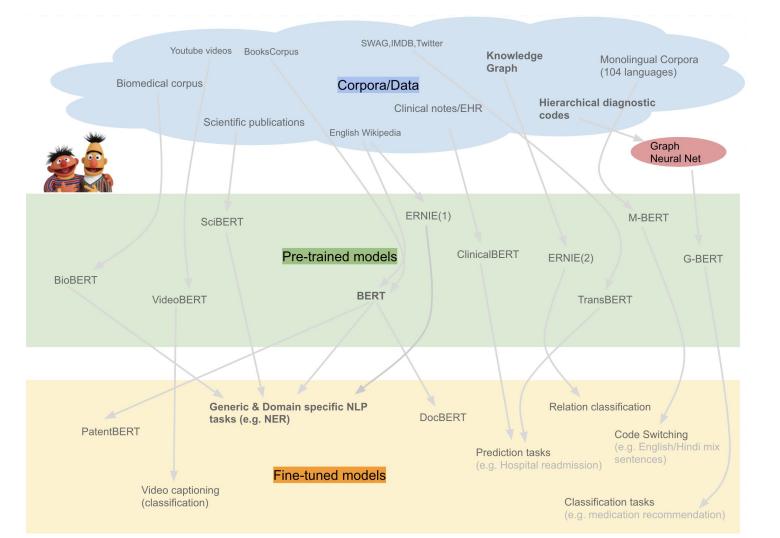

BERT: tokenization

Example: Unaffable -> un, ##aff, ##able

- Single model for 104 languages with a large shared vocabulary (119,547 <u>WordPiece</u> model)
- Non-word-initial units are prefixed with ##
- The first 106 symbols: constants like PAD and UNK
- 36.5% of the vocabulary are non-initial word pieces
- The alphabet consists of 9,997 unique characters that are defined as word-initial (C) and continuation symbols (##C), which together make up 19,994 word pieces
- The rest are multi character word pieces of various length.

BERT: tokenization

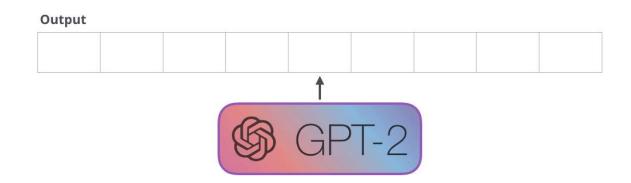

BERT: overview

- BERT repo
- Try out BERT on TPU
- WordPieces Tokenizer
- PyTorch Implementation of BERT

GPT-2 & GPT-3

- Transformer-based architecture
- trained to predict the next word
- 1.5 billion parameters
- Trained on 8 million web-pages

On language tasks (question answering, reading comprehension, summarization, translation) works well **WITHOUT** fine-tuning

Image source: https://jalammar.github.io/illustrated-gpt2

GPT-2: question answering

EXAMPLES

Who wrote the book the origin of species?

Correct answer: Charles Darwin

Model answer: Charles Darwin

What is the largest state in the U.S. by land mass?

Correct answer: Alaska

Model answer: California

GPT-2: language modeling

EXAMPLE

Both its sun-speckled shade and the cool grass beneath were a welcome respite after the stifling kitchen, and I was glad to relax against the tree's rough, brittle bark and begin my breakfast of buttery, toasted bread and fresh fruit. Even the water was tasty, it was so clean and cold. It almost made up for the lack of...

Correct answer: coffee

Model answer: food

GPT-2: machine translation

EXAMPLE

French sentence:

Un homme a expliqué que l'opération gratuite qu'il avait subie pour soigner une hernie lui permettrait de travailler à nouveau.

Reference translation:

One man explained that the free hernia surgery he'd received will allow him to work again.

Model translation:

A man told me that the operation gratuity he had been promised would not allow him to travel.

New AI fake text generator may be too dangerous to ... - The Guardian https://www.theguardian.com/.../elon-musk-backed-ai-writes-convincing-news-fiction 4 days ago - The Elon Musk-backed nonprofit company OpenAI declines to release research publicly for fear of misuse. The creators of a revolutionary AI system that can write news stories and works of fiction – dubbed "deepfakes for text" – have taken the unusual step of not releasing ...
